

Gabriel Ramirez

Full-Stack Developer | Payment Systems & Fintech Integrations

Caracas, Venezuela (Remote) · English: C1 · linkedin.com/in/gabriel-ramirez-soto · github.com/minombresgabriel
minombresgabriel@gmail.com · +58 412-200-9688 · portafolio-gabriel-avq9.vercel.app

Full-stack developer who owns both the financial core and the platform architecture of a travel agency system in production. On the payments side: 6+ international gateway integrations (Stripe EU/US, PayPal, Revolut, Klarna, Scalapay, Inespay, Fliinow), an automated accounts ledger driven by webhooks, and a dynamic commissions engine. On the platform side: designed the roles/permissions system, ran a security audit that caught real route-guard bypass vulnerabilities, and manage database migrations across environments. Stack: NestJS, React, Prisma, PostgreSQL, TypeScript.

EXPERIENCE

Arcadia Group — Full-Stack Developer

Aug 2025 – Present · Remote

Travel agency platform processing payments across Europe and the US. Primary developer of the platform's financial and operational modules.

- Integrated **6+ international payment gateways** in production — Stripe EU/US (separate regional webhook endpoints), PayPal Advanced Checkout with Hosted Card Fields, Revolut, Klarna, Scalapay, Inespay (PSD2 open banking), and Fliinow (BNPL) — including 3DS/SCA enforcement and end-to-end webhook lifecycle handling.
- Replaced a **400-line hardcoded commission switch/case with a dynamic commissions engine** (7 formula types, configuration-driven via admin UI), turning pricing changes into a self-service task — running in production billing correctly across all gateways.
- Built an **automated accounts ledger** driven by payment webhooks, with atomic balance transfers and idempotent fee handling.
- Built a **unified payments dashboard** consolidating data from 8 payment providers into a single operational screen for the finance team.
- Implemented **KYC/identity verification flows** (SumSub).
- Owned the full cycle: requirements, development, deployment, and client support.

Platform architecture & security

- Designed and built the **roles/permissions system** from scratch — a `user_module_permission` table driving dynamic menu rendering per role, plus a dedicated **AGENCY_ADMIN** role and last-login IP tracking.
- Ran a **security audit** of the roles/permissions layer that identified real route-guard bypass vulnerabilities, then fixed them.
- Manage **Prisma migrations** across dev, test, and production environments.
- Built supporting infrastructure: a cron-based job to clean up orphaned trackers, and led a **B2B subdomain migration** in cPanel.
- Frontend ownership beyond payments UI: KPI dashboard percentage badges, table layout fixes, and general bug fixes across the app.

SELECTED CASE STUDIES (FULL WRITE-UPS IN PORTFOLIO)

- **Dynamic Payment Commissions Engine** — hardcoded logic → configurable data-driven system (7 formula types).
- **3D Secure Enforcement & Its Real-World Limits** — SCA implementation and root-cause investigation of issuer enrollment gaps.
- **Automated Accounts Ledger** — webhook-driven balance movements with atomic transfers and idempotent fees.
- **Unified Multi-Provider Payments View** — 8 payment providers, one operational screen.

SKILLS

Payments & Fintech: Stripe (EU/US), PayPal Advanced Checkout, Revolut, Klarna, Scalapay, Inespay (PSD2), BNPL flows, 3DS/SCA, webhook lifecycle & reconciliation, commission engines, ledger systems, KYC (SumSub)

Backend: NestJS, Node.js, TypeScript, Prisma, PostgreSQL, REST APIs, cron jobs, webhooks, audit logging

Frontend: React, Next.js, Redux Toolkit / RTK Query, Tailwind CSS, Vite

Infrastructure: Vercel, Render, Supabase, Git, CI workflows, WhatsApp/notification integrations

Languages: Spanish (native), English (C1)

EDUCATION

Técnico Superior Universitario (TSU) in Informatics — Graduated Aug 2025

English C1 Certificate — Oxford English Academy
